

# SCAN COIN

Crèdit Andorrà  
Banking Industry

## We asked Crèdit Andorrà

With this innovating self service project which started in 2009, we gave full flexibility to the bank customers to execute their banking needs anytime, any day of the year, without limitation.

### What services do you offer your clients?

Coin and note deposit, cash dispensing, checking of account balances and movements, exchange coins-notes and notes-coins.

### Why SCAN COIN?

As technical supplier we offer an efficient cash management service, where CIT companies do not need to go to the stores to collect their cash. The fact that the clients come to the self service area to do their bank errands offers great flexibility, as they get the cash transaction registered to their account instantly.

Another very important point is the machine supervisor system SOGE which lets you know anytime if there is a technical problem, if a machine needs emptying because it is full, etc. It all leads to a more efficient cash handling.

## A complete solution

With an easy-to-use touch screen and a complete software platform for full connectivity and a solution for both coin and note deposits, the CDS-830 enables banks to maximize the benefits of the cash deposit.

A CDS solution means that you can benefit from intelligent logistics to process cash and free staff from manual cash handling tasks and offer you customers all benefits from a self-service solution. The CDS-830 is the superior model in the third generation CDS series from SCAN COIN and is designed to offer you all these advantages.

Notes and coin: a complete service to deposit cash.

It is easy to change the design of the touch screen.

Easy update of coin data thanks to the dongle. No risk of losing data or configurations.

CDS-830 has all necessary software tools for your complete integration.
